Unit â€“ 1 : Session â€“ 7 : SLO â€“ 1 | File and Device Management â€” Word Puzzle

I. Words Found in the Puzzle

• BUFFERING â€” storing data temporarily while it is transferred between devices.
• CACHING â€” keeping copies of frequently used data in faster storage.
• DMA â€” Direct Memory Access; lets devices transfer data without CPU involvement.
• DEVICE MANAGEMENT â€” OS component controlling I/O devices via drivers.
• FILE MANAGEMENT â€” creating, deleting, organizing files and directories.
• KERNEL â€” core of the OS coordinating all these services.
• SPOOLING â€” Simultaneous Peripheral Operations On-Line; queuing jobs for devices like printers.
• USER â€” the entity on whose behalf these services run.

II. Key Components

• File management: file creation/deletion, directory structure, access control, free-space tracking.
• Device management: device drivers, buffering, caching, spooling, DMA-based transfers,
• and a uniform I/O interface for applications.
