Unit â€“ 1 : Session â€“ 8 : SLO â€“ 2 | Types of Computing Environments â€” Unscramble

I. Unscrambled Words (Computing Environments)

• TRADITIONAL â€” standalone PCs/workstations on a LAN with client-server services.
• CLIENT-SERVER â€— clients request services; centralized servers respond.
• PEER-TO-PEER (P2P) â€— every node acts as both client and server; no central server.
• CLOUD COMPUTING â€— on-demand compute/storage over the internet (IaaS, PaaS, SaaS).
• MOBILE â€— smartphones/tablets with resource-constrained, touch-centric OSes (Android, iOS).
• EMBEDDED â€— OS inside dedicated devices (cars, appliances, IoT); often real-time.
• DISTRIBUTED â€— many networked computers cooperating to appear as one system.
• REAL-TIME â€— strict timing deadlines; used in control systems.
